

Instructions for running NS-3 seven-cell simulation

We use *lena-dual-stripe.cc* example as a template for running experiment. Copy *lena-dual-stripe.cc* (backup old file) to `ns-allinone-3.27/ns-3.27/src/lte/examples/`

Modified *lena-dual-stripe.cc* file [Download](#)

Run *start_ns3_seven_cell_sim.py* script. Script takes two arguments: path to ns-3 installation folder and output path where final logs are saved. Script uses additional parsing scripts (provided in zip file)
